Whether you’re into deep snow, backcountry or trail riding, staying warm and dry is essential. It’s all about layering; a science we’ve perfected.

Build your perfect combination of base, mid and outer layers with our easy-to-understand rating system to help you dial in the perfect balance of comfort and performance for you.

AT THE CORE OF EVERYTHING.

01 BASE LAYERS
It all starts here; it’s essential to stay dry, to stay warm. Base layers wick away moisture from perspiration against your skin, the first crucial step in preserving warmth.

P.38

COMFORT THAT ADJUSTS WITH YOU.

02 MID LAYERS
Using a mid layer allows you to adjust your ideal warmth level. Winter weather is notoriously variable. Stay ahead of the game, stay comfortable.

P.36-37

YOUR FIRST LINE OF DEFENSE.

03 OUTER LAYERS
Keep out the elements and hold in the warmth. We offer outer layers engineered with the highest performance materials like Sympatex, PrimaLoft and RPM technologies to match your riding style and needs.

NON-INSULATED P.22-24, 30
INSULATED P.25-35

SEE THEM IN-STORE You will find the same rating system in-store on our color-coded product labeling, with additional features and characteristics.

PROTECTION TECHNOLOGIES

Membrane

Sympatex®

Sympatex waterproof/windproof/optimally breathable membrane actually gets more breathable the harder you ride. Gear with Sympatex doesn't have pores like other membranes and can be washed over and over without clogging or loss of performance. SEE P.21

Coatings

RPM and RPM MAX coatings provide maximum waterproofness, windproofness and breathability no matter how tough the ride or how cold the environment.

Insulation

PRIMALOFT.

A high-performance insulation with the full spectrum of benefits to brave the elements. Committed to delivering feel-good products that empower you to stay in the moment. Warmer, drier, softer and more compressible than any other synthetic insulation. SEE P.31

Fabric

CORDURA®

CORDURA fabric is often added to garment zones that need additional durability, such as arm and back hem, inner legs and crotch for tough yet flexible comfort.

HOW TO MEASURE

- For best results, have someone else take measurements.
- Measure body in underwear.
- Tape must be snug but not tight.
- If measurements fall between two sizes, order the larger size.

Height: Without shoes, standing with heels and back against a wall.

Head: Around your head, from the center of the forehead, above the ears and over the natural bump at the back of the head.

Arm length: Let the hands hang down on the side in a slightly bent position. Measure from the center of the back of your neck, along the length of your arm, to the wrist.

Chest/Bust: Measure under your arm, around the fullest part of your chest.

Waist: Measure around your waist at the narrowest place.

Hips: Across the fullest part of the seat.

Inseam: Without shoes, from crotch to the floor.

Gloves: Measure palm width.

Boots: Foot length from heel to toe.

WHAT CODE REPRESENTS YOUR SIZE?

1. Find your size.
2. The corresponding code is THE CODE you use to complete the part number on your order.

Example: 440 227 90

Size: M = code "06"

Therefore 440 227 06 90

### SLIDERS WITH VESPEL INSERTS
- Uses DuPont Vespel inserts for less friction.
- Can be cut to desired length.
- Better fuel efficiency, more power and increased vehicle speed, due to reduced friction between the track clips and slides.
- Reduced need for maintenance and associated costs.
- Extended life due to enhanced wear characteristics of Vespel polyamide over incumbent UHMW PE.
- Allows riders to operate sleds in less than acceptable snow and trail conditions since water from snow is not needed for lubricity as with incumbent UHMW PE slide rails.

To install the studs, always use the installation tools, procedures and torque specified in the instructions. Proper installation provides maximum product longevity and helps prevent track damage. BRP recommends that studs be installed by authorized BRP dealers, and on approved pre-patterned tracks only. These tracks come standard on most 2020 Ski-Doo snowmobiles. Look for this symbol on your track. Woody’s products are designed to fit and interact with each other. The stud nut and support plate form a complete unit. The use of aggressive skis, ski carbide runners or studs will alter the handling of your snowmobile, particularly in terms of manoeuvrability, acceleration and braking. Please refer to your Operators Guide for more details.
